Tampa Bay, Florida

AFP 101: Font Basics (3 of 8)

Donald Scrima, Master-EDP
Principle

AFP Education & Consulting
dscrima@gmail.com

Wednesday Mar 17, 2010
9:30 AM - 10:20 AM

**Xplor® is celebrating our 30th year with the best value
and program in the electronic document industry!**

Agenda

- AFP Fonts
- Font Families and Type faces
- AFP Font Resource
- FOCA
 - AFP Font Architecture
- AFP Font Naming System
 - Expanded Core Font
 - Compatibility Font
- AFP Font Editor & Type Transformer (InfoPrint)
- AFP Font Manuals

Class Objectives

- What is a font
- Understand the types of files used to define fonts in an AFP document
- Comprehension of the font formats AFP use
- Understand the naming standards for AFP fonts
- Free Font tools

2010 Global Document Conference and Vendor Forum Tampa Bay, Florida

2010 Global Document Conference and Vendor Forum
Tampa Bay, Florida

AFP Fonts

Basics and Definitions

Xplor® is celebrating our 30th year with the best value and program in the electronic document industry!

What is a FONT

- A **font** is a combination of these:
 - A family or assortment of characters.
 - Type family
 - Courier example of a type family.
 - Typeface
 - Style, weight (for example, italic or bold), and width (normal or expanded) define typeface.
 - Normal means the typical size of characters, while expanded means that the character is wider than normal.
 - Type size
 - Fonts can range from small (4 point) to large (72 point).
- A font can include letters, numbers, punctuation marks and special characters.

Serif (Minion Pro)
• Old Style (Adobe Incons Pro)
• Transitional (ITC New Baskerville)
• Modern (Didot)
Slab Serif (Clarendon)
Sans serif (Myriad)
Script (Coronet)
Macletter (Teutonic No. 1)
DISPLAY (LiquidCrystal)
Monospaced (Courier)
◆◆◆◆◆◆◆◆◆◆ (ITC Zapf Dingbats)
(Dingbat)

Document University

Format of AFP character sets

- AFP supplies character sets in these formats:
 - Raster Format
 - 240-pel (un-bounded-box) raster format [3800 page mode]
 - 240-pel (bounded-box) raster format [IPDS]
 - 300-pel (bounded-box) raster format [IPDS]
 - Outline Format
 - Type1outline format for IBM Type Transformer
 - CID-keyed outline format for IBM Type Transformer
 - AFP outline format

Bitmap vs Outline Fonts

- **Font rendering: how the font is generated.**
 - Drew from a raster pattern of dots
 - OR
 - By a series of vector describing the character

Bitmap or Raster Font

resolution dependent

Outline Font

resolution independent

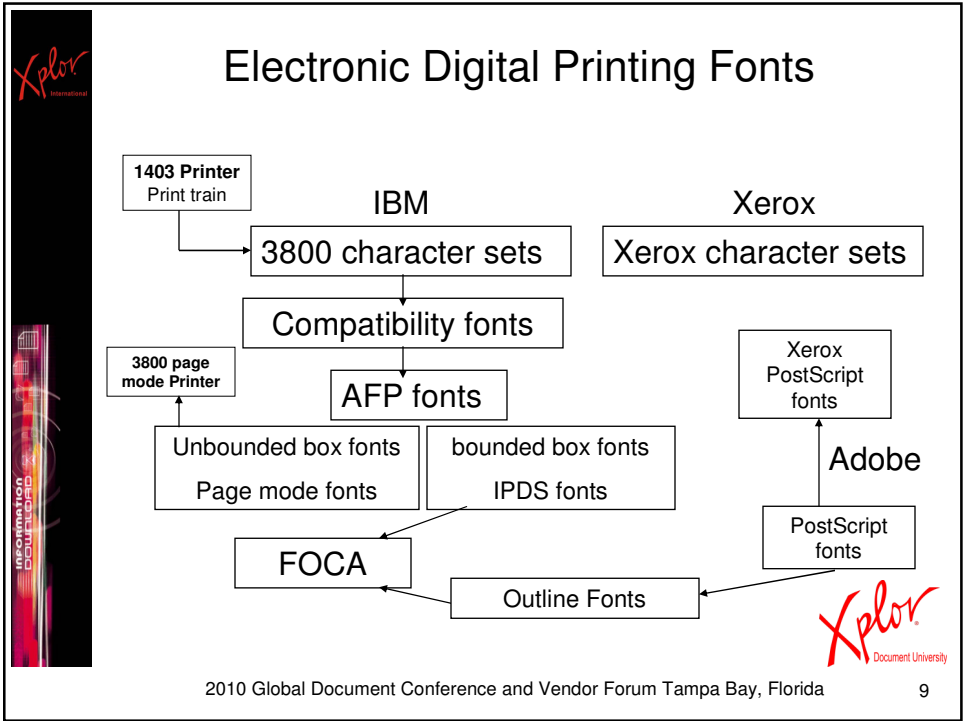

AFP Box Fonts

Bounded box font
(IPDS font)

Unbounded box font
(3800 page mode font)

Font Spacing

- **Monospaced font - Uniformly Spaced Font**
 - *fixed-pitch* and *uniformly spaced* fonts
 - similar to typewriter characters
 - each character is the same width
- **Proportionally spaced fonts** have characters with different widths.
 - Narrow characters such as "i" and "l" print w/ less space
 - Wider characters such as "m" and "A"
 - The average spacing is 12 characters per inch (cpi)
- **Typographic fonts** -- are proportionally spaced fonts.
 - Have variable character widths
 - The character increment is part of the design
 - Varies on a character-by-character basis
 - Character width space is in proportional to the glyph
 - the lowercase *i* and the '.' (*period*) occupy narrow spaces. The uppercase *M* and *W* occupies a wide space.
 - iM.WiM.WiM.W

Monospaced

i.M.i.M.i.M.i.M.i.M.i.M.i.M.

Typographic

i.M.i.M.i.M.i.M.i.M.i.M.i.M.

10

Pitch

- **Pitch** Monospaced fonts are often described or referred to in *pitch*, or the number of characters printed in 1 inch
- Pitch is also referred to as characters per inch (CPI).
- Examples Courier, Letter Gothic

1234567890
 This is 10 pitch or 10 characters per inch.

123456789012
 This is 12 pitch or 12 characters per inch.

12345678901234567890
 This is 20 pitch or 20 characters per inch.

Point Size

- All fonts are measured in *points*, the vertical size of the font.
- One inch is equal to approximately 72 points.
- Point size is a baseline-to-baseline measurement, which includes minimal white space.
- The *baseline* is the line upon which the characters rest.
- Thus, the actual height of the characters in an 18-point font is less than 18 points.

This is 7 points.
 This is 8 points.
 This is 9 points.
 This is 10 points.
 This is 11 points.
 This is 12 points.
 This is 14 points.
 This is 16 points.
 This is 18 points.
 This is 20 points.
 This is 24 points.
 This is 30 points.
 This is 36 points.

8 7 9 10 11 12 14 16 18 20 24 30 36

- The line spacing usually includes one or more additional points of white space between lines of type.

Font Metrics

- Fixed metrics
 - Fonts have all character positioning metrics expressed in whole-pel values
 - 240-pel fonts are fixed-metric fonts
 - Bottom line- fraction of units are rounded up or down (visually may introduce error)
- Relative metrics
 - Fonts were developed for scaleable outline fonts where a single metric value could be used to determine a pel value given a desired resolution and point size
 - Relative metrics are based on 1000 units per “em space,” which means the fonts are designed for a hypothetical 1000 dpi, 72-point font where each side of the bounding box is 1000 pels
 - All AFP outlines and 300-dpi fonts contain relative metrics
 - Bottom line- white space is added for accumulated fraction of units

Font Orientation

CHARACTER ROTATION	RESULT
0 degrees	ABCDE
90 degrees	A B C D E
180 degrees	EDCBA
270 degrees	E D C B A

- Fonts can be rotated in AFP
- Font rotation is a separate function from print direction
- Orientation is a combination of:
 - Print direction
 - Font rotation
- Fonts can be rotated 4 ways with in each print direction
- 3800 prints in only 3 directions (back is not supported)

Print Direction & Rotated Characters

Print Directions and Rotated Characters

ACROSS

DOWN

- Page printers require separate font for each PRINT ORIENTATION
 - Page Mode printers use **unbounded box fonts**
 - 12 possible orientations (3 directions X 4 rotations)
 - 2 possible directions (Across or Down)
 - Examples:
 - Direction Across Rotation 0
 - Direction Down Rotation 0
- Font naming conventions indicate rotation in 2nd digit
 - X1 = direction ACROSS rotate 0
 - X2 = direction DOWN rotate 0
- Rules are different for IPDS printers
 - IPDS printers use **bounded box fonts**
 - X0 is prefix for bounded box fonts

Print Direction	Character Rotation (in degrees)			
	0	90	180	270
Across (0)	ABCD	>B<C<	VBCD	<BCD>
Down (90)	DCBA	DCB	DCBA	ABCD
Back (180)	DCBVA	DCBVA	DCBA	DCBVA
Up (270)	ABCD	DCBVA	DCBVA	DCBVA

Tampa Bay, Florida

AFP Font Resource

Xplor® is celebrating our 30th year with the best value
and program in the electronic document industry!

AFP Character Set

- Font Character Set
 - This resource contains the raster patterns for each character in the font and associates an 8-byte character identifier with each pattern. This resource also contains descriptive information for the entire character set.
 - Characters
 - ABC abc 123 !@#
 - Characters Properties
 - Baseline
 - Position
 - Character ID
 - Printing Attributes
 - Character rotation [0 90 180 270]
 - Maximum ascender
 - Point size
 - Example: **C0DOGT10**

AFP Code Page

- Code page
 - This resource associates code points with character identifiers, each representing a character raster pattern. A code point is an 8-bit binary number representing one of 256 potential characters.
- Example: **T1V10037 T1D0BASE**

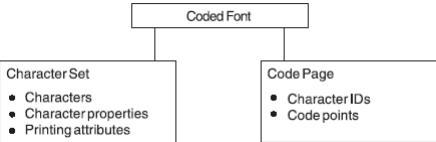

Hex Codes from 2041	4-	5-	6-	7-	8-	9-	A-	B-	C-	D-	E-	F-
+0	à	á	â	ã	ä	å	æ	ç	è	é	ê	ë
-1	ä	é	Ê	ä	í	ñ	Ë	À	Í	Ó	Û	Ü
-2	ä	é	Ê	ä	í	ñ	Ë	À	Í	Ó	Û	Ü
-3	ä	é	Ê	ä	í	ñ	Ë	À	Í	Ó	Û	Ü
-4	ä	é	Ê	ä	í	ñ	Ë	À	Í	Ó	Û	Ü
-5	ä	é	Ê	ä	í	ñ	Ë	À	Í	Ó	Û	Ü
-6	ä	é	Ê	ä	í	ñ	Ë	À	Í	Ó	Û	Ü

FOCA

AFP Font Architecture

Xplor® is celebrating our 30th year with the best value
and program in the electronic document industry!

FOCA Introduction

- **FOCA** (Font Object Content Architecture) defines the content of:
 - Font Resources
 - Reference to Font Resources
 - Information access from font Resources
- *Font* (in FOCA) is a set of graphic character symbols that share a characteristic design
- **Font Resource** consists of a collection of graphic characters & associated descriptive character position & character shape information that represents a particular type family in one or more type faces & type size.

2010 Global Document Conference and Vendor Forum Tampa Bay, Florida

26

FOCA Components

- A common model for
 - identifying,
 - measuring and
 - position the characters of a font
- A device & technology independent method of defining font measurements
- Set of parameters that can be used to create
 - font reference
 - access for font resource information
- General structure of font resource information
 - Data type
 - Range of values for each font attribute

2010 Global Document Conference and Vendor Forum Tampa Bay, Florida

27

FOCA Font References

- Font References- identify font used for a document
- Font identification can be in two ways:
 - A) specify 4 attributes that ID a font;
 - Character set content
 - Character set encoding
 - Font typeface
 - Font size
 - The 4 attributes are specified as using a global character set ID (GCSGID), code page, typeface, font size
 - B) specify characteristics that font must meet
 - Defining list of significant font attributes
 - Application selects font that best matches the list of attributes

2010 Global Document Conference and Vendor Forum Tampa Bay, Florida

Understanding AFP Font Naming System

Naming Format for:

- Expanded Core Fonts
- Compatibility Fonts

Xplor® is celebrating our 30th year with the best value
and program in the electronic document industry!

AFP Font Naming Convention Expanded Core Fonts

First Character	Font Component	Example
C	Character Set	C0H200B0
X	Coded Font	X0H200B0
T	Code Page	T1V10037

EXAMPLE Latin1: Helvetica 12-point roman medium normal

2010 Global Document Conference and Vendor Forum Tampa Bay, Florida

30

Code Page Names Expanded Core Fonts

T 1 V 1 0 0 3 7

T 1 Y Y Y Y Y Y

Extended Core
For US and Canada
countries

Preferred Code Pages

Y	Y	Y	Y	Y	Y	Category
0	0	n	n	n	n	Expanded Core
V	1	n	n	n	n	Expanded Core
B	0	n	n	n	n	BookMaster

Language	Code page ID	CDP	ECP	Description
	T1V10037	X	X	Country Extended: United States, Canada
	T1V10273	X	X	Country Extended: Austria, Germany, Switzerland
	T1V10274	X	X	Country Extended: Belgium

2010 Global Document Conference and Vendor Forum Tampa Bay, Florida 33

Font: Code Page Names

For example, *T1V10037*
identifies a specific code page. In the example, the name identifies
different properties of the code page:

Component	T	T	Identifies the object as a font code page
Format or Orientation	1	1	Identifies the font as one that will
Type Family	Y	V	Identifies the Expanded Core
Typeface	Y	1	Identifies the Expanded Core
Code Page Category	Y	0	Identifies Country Extended: US Canada
Complement	Y	0	Identifies Country Extended: US Canada
Typographic Font	Y	3	Identifies Country Extended: US Canada
Coded Font	Y	7	Identifies Country Extended: US Canada

2010 Global Document Conference and Vendor Forum Tampa Bay, Florida 34

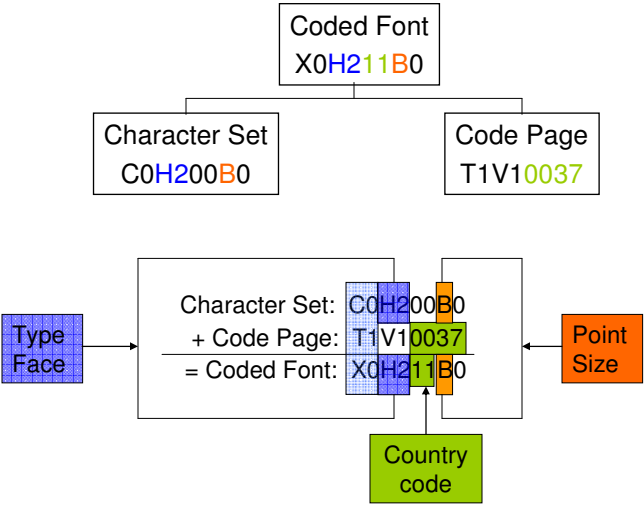

Font: Coded Font Names

For example, *X0H210B0* identifies a specific coded font. In the example, the name identifies different properties of the coded font:

Component	A	X	Identifies the object as a font Coded Font
Format or Orientation	F	0	Identifies the font as one that will print on a bounded-box printer (0 orientation)
Type Family	R	H	Identifies the type family as Helvetica
Typeface	S	2	Identifies the style as roman medium normal
Code Page Category	T	1	Identifies the Code page T1V10037
Complement	C	1	Identifies the Code page T1V10037
Typographic Font	P	B	Identifies the point size 12
Coded Font	X	n	Identifies the

AFP Font Editor & Type Transformer

Xplor® is celebrating our 30th year with the best value
and program in the electronic document industry!

Type Transformer & Editor

- Type Transformer, a part of IBM(R) Infoprint(R) Fonts, is a program that transforms IBM Type 1 format and CID-keyed format outline fonts into fonts that can be used with IBM's AFP/IPDS printers. The following utilities are included with Type Transformer to enable you to add user-defined characters (UDCs) to the Japanese, Korean, Simplified Chinese, and Traditional Chinese fonts in IBM Infoprint Fonts:
 - The FontLab graphic character editor
 - The AFP(TM) Font Editor for code pages and coded fonts
 - Sample code pages and batch files
 - The AFP2FON utility, which converts raster fonts to outline fonts
 - The CID2EPS utility, which extracts a character from a font and presents it as an EPS image
 - The DUVRMARK utility, which changes the date and time stamp or capture setting of a font
- Now available Free down load from:

http://www-01.ibm.com/support/docview.wss?rs=95&context=SWK60&dc=D400&q1=%2bfonts&uid=psd1P4000840&loc=en_US&cs=utf-8&cc=us&lang=all

Introduction to AFP
AFP A functional Perspective (CEU Certification Continuing Education Units)
IPDS
AFP Color for TransPromo Printing

About the instructor

Donald Scrima, M-EDP has some 30 years experience in the IT industry and Transaction Printing. He has been a System Programmer, Computer Operations Manager, Computer Trainer and System Engineer during this time. Mr. Scrima has been involved with Advanced Function Printing [Presentation] (AFP) since 1988, working with PSF, application and resource generation and IPDS hardware. Mr. Scrima received his EDP certification in 1995 and since re-certified 2 times. Don in 2009 Certified as a Master-EDP (Expertise in Print Datastreams specializing in AFP Architecture and Data Stream) newly offered by XPLOR, being one of the first to receive this EDP expert level. He has been a speaker at Xplor Global Conferences each year since 1994, primarily speaking on AFP. Don has also, presented at numerous Xplor Chapter meetings, SHARE Technical Conferences, and NaSPA, NaSTC conferences. He is currently President of the XPLOR Ohio Chapter, and has been Vice President. He is also currently XOLPR Midwest Region is President. Previously Don has served as the Southern Region President and VP, and as XPLOR Citrus Chapter President. A strong supporter of EDP certification he is currently Chair of the EDP commission and has served 2 terms on the commission. Mr. Scrima is Principle at AFP Education & Consulting, A consulting firm providing AFP training, applications development and support. Previously, he was a Sr. System Analyst Workflow Solutions III with Eastman Kodak Company, in the Inkjet Printing Solutions, Graphic Communications Group. Providing AFP and multiple data stream support for the Versamark ink jet color systems. In the past, Don was with Océ North America (Siemens Printing Systems) as a Sr. National System Engineer and Sr. Software Trainer. He has worked at Computer Learning Center, Los Angeles teaching computer operations and programming. Don began his AFP career with IBM's class on DOS/VSE PSF this to implement AFP printing in the Operations Classes he was teaching in 1988. Since then he has developed applications for print, created resources, and provided system support for PSF on VSE, VM and MVS. He has been the instructor for
